**UPLANDS WAY
VETERINARY CLINICS**
The family vets for family pets

—OUR CLINICS—

Become part of the family

uplandswayvets.co.uk

WELCOME TO THE UPLANDS WAY VETS FAMILY.

We are a family run, privately owned business which has been within Norfolk and Suffolk for over 100 years.

We pride ourselves on our clinics being able to look after any animal family member, from a gerbil to a Zebra, and everything in-between!

Our family of vets, vet nurses and receptionists work hard to provide a friendly and professional service to all our customers and their animals. We have three clinics, in Diss, Attleborough and Stanton so we can offer complete pet and animal care throughout most of Norfolk and Suffolk.

To find out more information please visit uplandswayvets.co.uk

You can also follow us at:

 [@uplandsway_vets](https://twitter.com/uplandsway_vets)

Diss 01379 642 865 | Attleborough 01953 454 945 | Stanton 01359 251 730

SMALL ANIMAL

We have a dedicated team of vets and nurses who can provide all round care for any type of pet, from birth to old age. All our staff are pet owners themselves so they can all sympathise with any situation and always put your pet's care first.

We can offer a complete range of services to include:

- Pet Care Plans to save you money and allow you to budget for your pet's preventative health care
- Complete preventative health care to include vaccinations
- Routine consultations
- 24 hour emergency care
- Nursing clinics
- Puppy parties
- Internal and external orthopaedic fixations
- All surgical procedures
- Risk hip and elbow radiographs
- Home visits when needed

We also have modern facilities which include:

- In house laboratory services
- Ultrasonography
- Digital radiography
- Endoscopy
- ECG
- Dentistry
- Large modern consulting rooms
- Car parking at all 3 clinics

Please ring any of our clinics for more information on what we can provide for you and your pet.

Diss 01379 642 865 | Attleborough 01953 454 945 | Stanton 01359 251 730

EXOTICS

We are very proud to be able to offer an excellent exotic service as we are the vets of choice for Busham Zoo and Africa Alive! This has allowed us to collect a wealth of experience and knowledge with most exotic species, which can then be translated to the exotic pets we see.

We have been working alongside these zoos for many years and are able to offer them a full range of diagnostic tests as well as medical and surgical treatment options for any exotic species.

As well as the full range of equipment which is available to our small animal patients, we are also able to offer in-house hospitalisation facilities to most species of exotic pets.

We also work closely with other charities and clubs, as well as Local Authorities to provide exotic services, treatments and advice.

If you would like to discuss any requirements you may have for your exotic pet please do not hesitate to ring our main [Diss Clinic on 01379 642 865](tel:01379642865).

uplandswayvets.co.uk

EQUINE

We have knowledge and experience of a wide range of equines as we look after many pleasure horses, competition horses and we are the vets for the well known equine charity; World Horse Welfare and for the equines at Busham Zoo.

This means that we look after all types of equines from miniature ponies to giant Irish horses, African Zebras and Suffolk Punches. We also look after the conservation grazing ponies for Norfolk Wildlife Trust, Suffolk Wildlife Trust, The National Trust and The Breeds Authority.

We offer modern services to a high standard of care to include:

- Portable digital radiography
- Portable endoscopy and ultrasonography
- Equine Care Plans to save and budget money on preventive health care
- In house worming regimens
- Free visit days in certain areas*
- All routine health care
- Certain surgical procedures, under both local and general anaesthetic
- Dental examinations and treatment
- Fertility services
- Day patient facilities within the World Horse Welfare's yard at Swanton
- Lameness work-ups

Please ring our [Diss Clinic on 01379 642 865](tel:01379642865) for more information on any of our equine services as our equine work is booked through our office there.

*Times and conditions apply.

Diss 01379 642 865 | Attleborough 01953 454 945 | Stanton 01359 251 730

FARM ANIMALS

We provide a comprehensive 24 hour service for all farm animals, from routine herd/flock health visits to emergency caesareans.

Operations, such as LDs and caesarean section, are generally performed on the farm, but costs can be reduced by bringing the smaller ruminants into the surgery where we have facilities available. Our nursing team are also experienced in dealing with farm animal surgical procedures.

We are happy to be involved with preventative health care in farm animals, which may include herd and flock health schemes in conjunction with external advisors.

We are fully committed to supporting agriculture in Norfolk and Suffolk and if you would like to discuss your livestock with us please ring our [Diss Clinic on 01379 642 865](tel:01379642865).

OPENING HOURS

Diss	Attleborough	Stanton
Mon - Fri 9.30am - 6.00pm	Mon - Fri 9.30am - 6.00pm	Mon & Wed 9.30am - 6.00pm
Sat 9.30am - 12.00pm	Sat 9.30am - 12.00pm	Tue, Thurs 9.30am - 12.00pm
		Fri 9.30am - 6.00pm
		Sat 9.30am - 12.00pm

OUT OF HOURS

We are very proud to offer an out of hours service which is provided by our own vets.

This means that when you have an emergency you will be seen by a friendly face that you are likely to recognise, which will help you and your animal to feel more relaxed. It also means that you will be able to meet the vet at a clinic which is local and you know, again helping to make a difficult and stressful time a little easier.

Our out of hours service operates 365 days of the year.

Midweek answer our out of hours phones for us but it will be one of our vets who will phone you back once the call has come through.

If you have an emergency outside of our normal opening hours call 01603 481 201.

A Proven Flood Protection System

Protecting Homes and Businesses across the UK for the last 15 years

Flood Ark is a tailor-made demountable barrier system offering complete protection to virtually any opening

- Quick and Easy to Deploy
- Unique Technology to Guarantee a Watertight Seal
- Kitemark Licence held since 2004 and products tested to the latest 2014 Standard
- Tested to 4000mm (13ft) in width and maximum permitted height
- 3 Year Guarantee that can be renewed after servicing

"Alconbury Brook was recorded at 11 feet (3.4 metres) yesterday and we had 15 inches of water at the gateway to my property. The Flood Ark did its job brilliantly, if we didn't have the barrier our house would have flooded!"
Mr Marshall (March 2016)

floodark.com

A Proven Flood Protection System

Tried and Tested

We have established a national reputation for the quality and effectiveness of our systems

"I chose your system because I didn't want to be excluded from it as a pensioner in my own home. When I discovered Flood Ark on the web I thought that's exactly what I need. I can build up the level as required. I can still have two boards up and get in and out of the cottage."
Barry, Lyngdon

"Unbelievable downpour, we decided to get the flood boards up by the time we had put up the first board we needed all four boards. No water got through but we were up to my knees. Three quarters of an hour later the flood water was gone and the shop was back trading."
Colin Jones, Cook Veterinary Practice (June 2016)

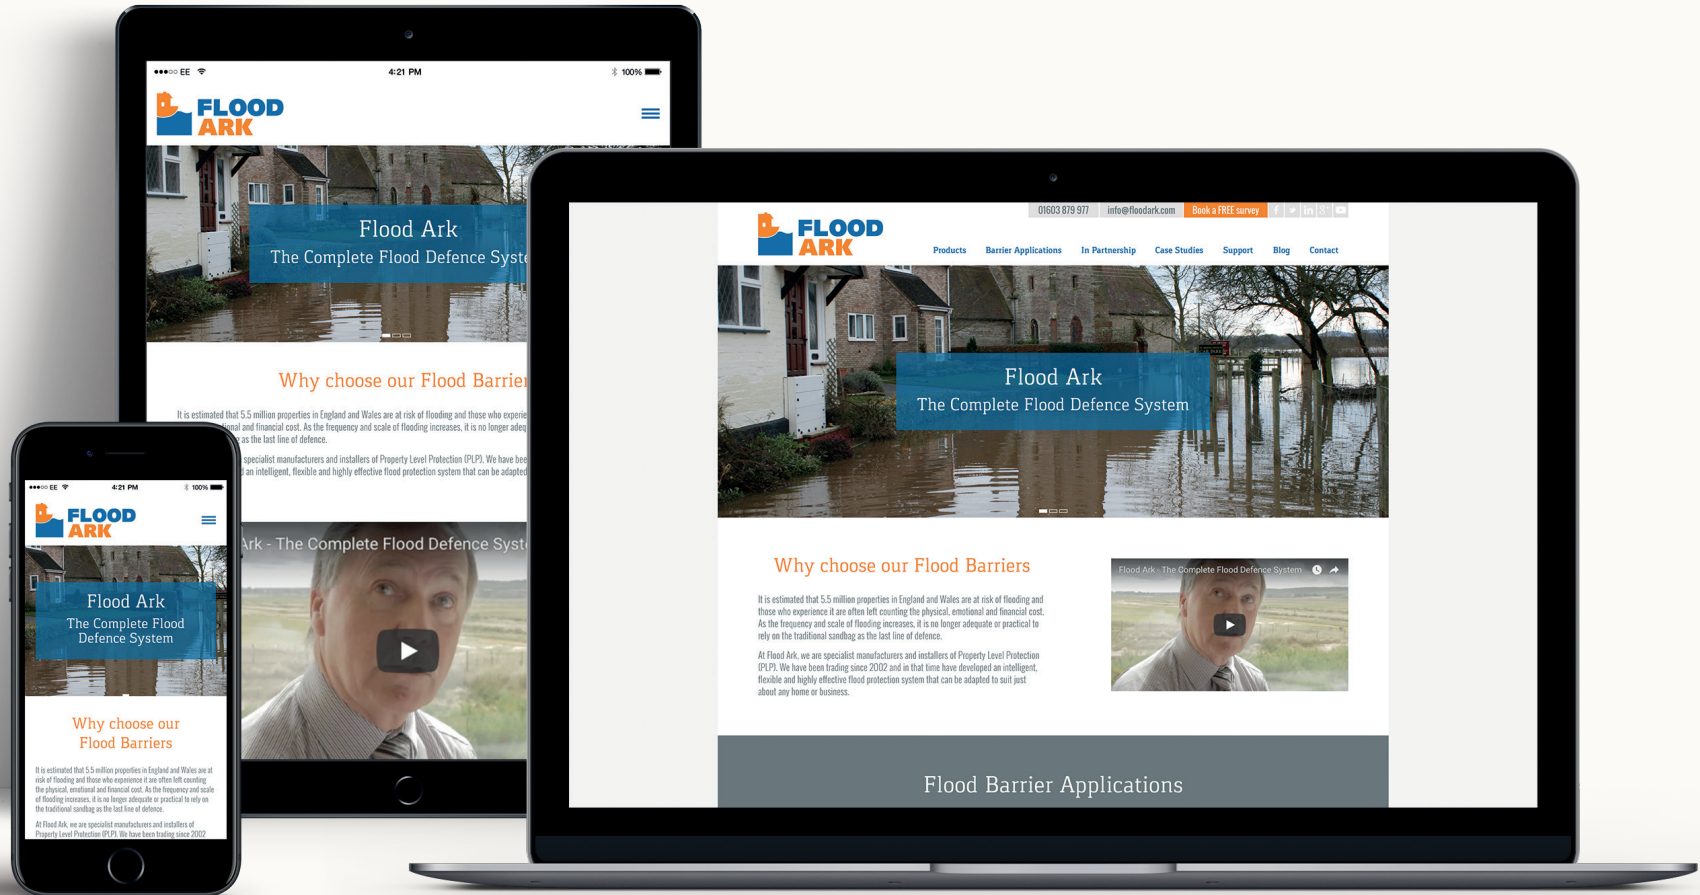

"In situations like this you need professional contractors and consultants around you who react quickly whilst installing a quality product. Flood Ark have been very easy to work with and we wouldn't hesitate in recommending them."
Steve Smith, Great Reading Association

Working with our Partners across the UK

- Property Level Resilience Framework
- Water Utility Companies
- Housing Associations

Floodark's Flood Water Pumping Station

When the rain keeps falling, be prepared and counter the risk of groundwater flooding with Floodark's flood water pumping station.

Features and Benefits

Floodark's powerful pumping station is capable of removing 13,000 litre per hour of floodwater (216 litres per minute). The heavy duty Zoeller sump pump resists clogging and can pump up to 12mm of solids. Zoeller Pumps are one of the most reliable series of pumps available in the UK and will perform reliably for many years.

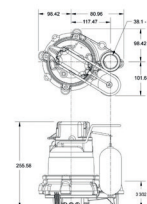

- Easily assembled station kit can simply be set in the floor and automatically switches on and off when the sump container fills up, flood water is then pumped out through fixed pipe work.
- The pumping station can be installed in a basement, in a cupboard, beneath a kitchen unit. Comprehensive installation instructions are provided. We can also provide a fitting service price.
- When used in conjunction with floodark doorway barriers the pumping station can minimise the impact of groundwater flooding, stopping flood water outside getting in and pumping out any water coming up from below.
- The Environment Agency practical advice to help you reduce the impact of flooding from groundwater state the most effective way to keep groundwater out of your property is to use a pump system.

Visit floodark.com for further information and to view the Pumping Station in action, alternatively call 01603 879 977 or email info@floodark.com

The Technical Bit

Pump Features and Benefits:

- 1/2 HP Motor
- 13,000 Litres per hour capacity
- 38mm discharge with 12mm solids handling
- Single phase, 50 Hz, 240 volts
- 10 metre power lead with 1.3a plug top
- Cast iron pump for silent running and efficient motor cooling for prolonged working life
- Auto and Non Auto options
- Oil-filled, hermetically sealed, automatic reset thermal overload protected motor for extended life
- Corrosion resistant powder coated epoxy finish
- No sheet metal parts to rust or corrode
- Entire unit pressure tested after assembly
- 12 months warranty

Protect your Drains

Non-Return Valves for Sewage

Property flooding can also occur from the back-filling of sewerage pipes, causing flood water to force its way in to downstairs toilets, baths, showers, basin & sink push holes or washing machines and dishwasher appliances.

The traditional solution to this problem has been to excavate a new manhole outside the property and fit an automatic non-return valve within its own chamber to eliminate the risk of backflow. This is a good but very expensive solution.

The Watersight International Non-Return Valve (NRV) is designed for quick and easy installation: it simply pushes into the end of a 110mm/4" outlet pipe where it opens from the property into an inspection chamber / manhole. The NRV allows water and waste to pass out from the property but will allow nothing back in as the valve's resting position is closed.

There are three versions available, two for plastic pipes and one for salt-glazed clay pipe. WRc Approved P2/14/0111.

Call 01603 879 977 or email info@floodark.com, alternatively visit floodark.com for further information.

Flood Ark Protection System Assembly Instructions

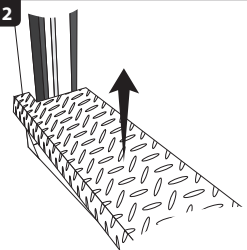

For more information visit www.floodark.com/support

1

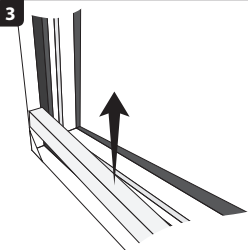

Retrieve flood boards from storage and wipe clean.

2

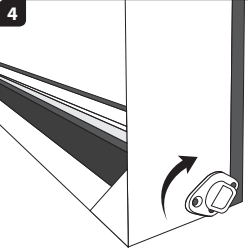

Remove the cover treadplate(s). Use the lifting keys for heavy steel treadplates.

3

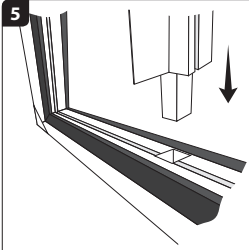

Remove the poly-foam insert that protects the bottom gasket.

4

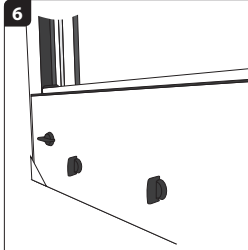

Close the drain bung at the side of the base frame by turning clockwise.

5

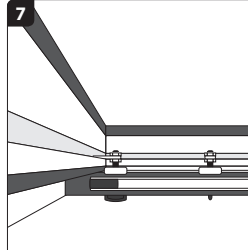

If the system includes a centre mullion post or intermediate posts, position post spigot into socket.

6

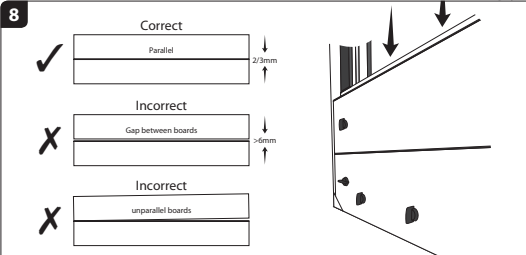

Place the bottom board into position behind the frame corner guide plates.

7

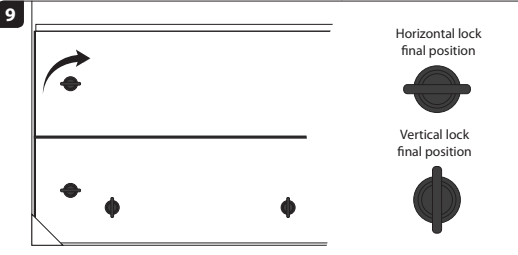

¼ Turn compression locks clockwise to loosely locate the pawls into the frame slot.

8

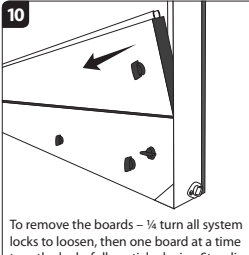

Add further boards, ¼ turn the locks each end to loosely locate pawls so the board cannot fall off. Click and fix together by pressing down hard one end, continue to press along the length in small steps until the boards click fully together. Check boards parallel and no gap.

9

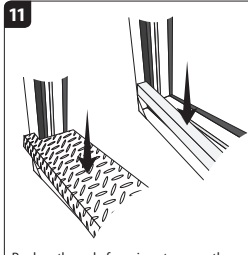

After all the boards have been added turn the locks clockwise as far as possible to compress the gasket and create a watertight seal. If system includes a top rail(s), remove frame caps and position rail end spigots into the frame.

10

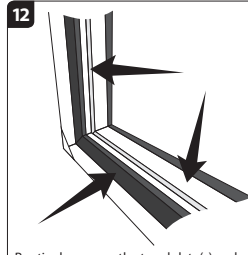

To remove the boards – ¼ turn all system locks to loosen, then one board at a time turn the locks fully anticlockwise. Standing in the middle, lean forward until the board pops off. Repeat as necessary. For the bottom board shake and lift out.

11

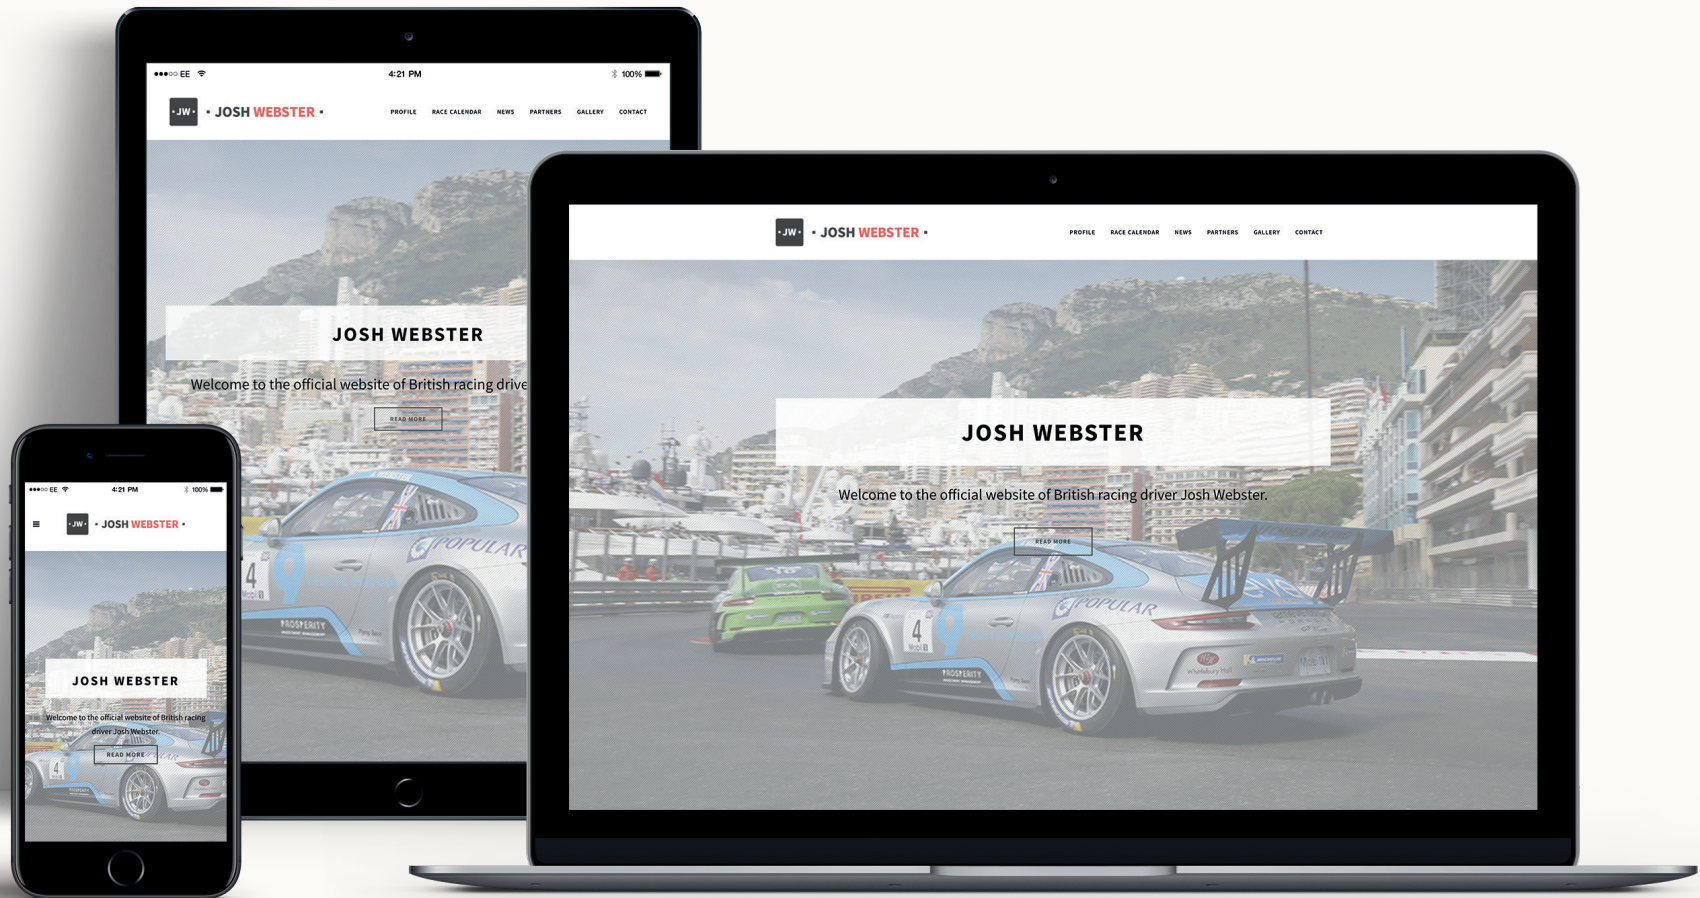

Replace the poly-foam insert, ensure the end slits locate over the corner plates so there is no gap between the insert and the bottom gasket. Replace the cover treadplate(s).

12

Routinely remove the treadplate(s) and poly-foam insert(s). Wash clean or vacuum the frame and gasket seals to remove dirt build up.

PROUD TO BE GRITTING BRITAIN!

ABOUT

Ice Watch is one of the longest standing national winter risk management businesses in the country, serving both the public and private sectors. With over 100 gritting teams, awarded numerous accreditations over the years and £10m public liability insurance, you can be assured of the highest industry standards and a professional service.

SERVICES

ARE YOU?

SINGLE SITE PROPERTY OWNERS

You understand how vital it is for your business to remain operational in all weathers. During the winter season the added pressure of ensuring your site is safe for all seems a burden you could well do without. Whatever the size of your site, we help you to manage risk effectively and remove the burden of responsibility for sites and roads - you have a duty to customers and employees alike, as we have a duty to you. Your dedicated account manager will be proactive in all aspects of our service and will ensure preventative measures are taken to keep your sites operational at all times. We are proud of the full service operation we have built over the years and, with a clear understanding of our clients' needs and expectations, you can rely on the knowledge that you're in the safest of hands when winter takes hold. We've never missed a day's gritting, and we've never had a claim to defend. We intend to keep it that way.

Putting you in Control

Our text and email notification procedures keep you fully aware of the surface conditions and our recommendations to aid an all-cause 'safe of hours' to minimise disruption to you, your staff and your customers.

MULTI SITE/FACILITIES MANAGEMENT COMPANIES

If you are responsible for multiple sites across the UK we understand that managing safety is a challenge in itself. It is even more daunting when faced with site closures or heightened risk during winter conditions. That's why we've developed our service over the years to accommodate many scenarios - and that's why we are part of the winter risk strategy for many F&P and property management companies throughout the UK. Ice and snow are a hazard that most businesses have to face at some point during the year, but no matter how large your facilities, we help you meet that duty of care. Our teams are local to your sites and have the necessary equipment to back up measures in place, materials and training to ensure all aspects of your sites are ice and snow free. At any one time, we have at least 1 year's stock of materials available - we have never run out of salt as we hold significant regional stockpiles as well as an in-hub - and all our dedicated operators hold stocks themselves. We've never missed a day's gritting, and we've never had a claim to defend. We intend to keep it that way.

It's our job to ensure your workforce get to theirs.

HEALTH AND SAFETY

The Health and Safety at Work Act 1974: Don't Slip Up!

The Health and Safety Executive is keen to highlight, legal actions brought about as a result of injury can be extremely damaging to business, especially where the public are involved. With regards to frost, ice and snow, the HSE states that employers must assess any risk and put a system in place to manage it. We help your business to:

1. Identify the outdoor areas used by pedestrians most likely to be affected by ice, for example building entrances, car parks, pedestrian walkways, shortcuts, sloped areas and areas constantly moist or in the shade.
2. Monitor the outdoor temperatures after all prevention is key. You need to take action whenever freezing temperatures are forecasted.
3. Put a procedure in place to prevent any icy surface forming and/or to keep pedestrians off the slippery surface.

We provide our clients in both the public and private sectors with a complete and economical solution to managing the risk from frost, ice and snow. We'll carry out your risk assessments and put a full forecasting, reporting and gritting service in place. We will also maintain all records to verify that the appropriate action has been taken.

Under the Health and Safety at Work Act 1974:

Employers have to ensure that their employees and anyone else who could be affected by their work (such as visitors, members of the public, patients and are kept safe from harm and that their health is not affected. This means slips and trips risks must be controlled to ensure people do not slip, trip and fall.

With regards to frost, ice and snow, the HSE states that employers must assess any risk and put a system in place to manage it. We help your business to:

1. Identify the outdoor areas used by pedestrians most likely to be affected by ice, for example building entrances, car parks, pedestrian walkways, shortcuts, sloped areas and areas constantly moist or in the shade.
2. Monitor the outdoor temperatures after all prevention is key. You need to take action whenever freezing temperatures are forecasted.
3. Put a procedure in place to prevent any icy surface forming and/or to keep pedestrians off the slippery surface.

We provide our clients in both the public and private sectors with a complete and economical solution to managing the risk from frost, ice and snow. We'll carry out your risk assessments and put a full forecasting, reporting and gritting service in place. We will also maintain all records to verify that the appropriate action has been taken.

A Fully Trained Nationwide Team

All our nationwide team of skilled operators are fully trained, suitably equipped and expert in dealing with the harshest of weather conditions. Our operators are trained to your site and build up an in-depth knowledge, often spotting issues or problems before they arise. By using the latest forecasting technologies, our highly skilled operators take into account the many variables that must come into consideration before we decide to grit.

Working closely with and spacing daily to our UK-wide dedicated operators who are equipped with the latest and most accurate equipment, we can nearly treat everything from the largest car parks to the smallest pathways and steps. We only grit when absolutely necessary and only with your confirmation, ensuring your car parks, walkways and public spaces are treated and protected when you need them to be.

Pricing for all Budgets

We will design a quote and service specifically to accommodate all your needs to ensure you are fully protected. Remember, if there is ever any doubt about whether it is necessary to grit, our skilled operators will inspect the site free of charge and accordingly, using professional judgement. If you decide not to proceed for any reason, we will not charge - this helps you keep control of your winter maintenance spend.

Call today for your FREE consultation and no obligation quote. Get the protection you need, when you need it.

Gritting and Snow Clearance

We know that no two sites are the same and, consequently, requirements for each client will need to be bespoke. We use our extensive experience and knowledge of environmental variations to calibrate equipment to deliver the materials required for the conditions. And with our snow clearance facility being integral to the overall gritting operation, it's a combined service you can rely on.

Site Assessment

We inspect all sites at the start of the working relationship, assessing the most effective approach towards prevention and snow clearance. Working alongside your site management staff, we form effective lines of communication and determine the best way to apply our services in order to minimise disruption to your business and customers.

24/7 Forecasting

At Ice Watch we have combined weather forecasting services from The Met Office and Weathercast to provide prompt and accurate information for our clients that is second to none, ensuring you're always ahead of the conditions. This combined intelligence is linked again to a range of industry sectors including roadbuilding, grit roads, recreation, agriculture, wind energy and airports.

Analysing and Reporting

Our team of expert analysts can quickly interpret data provided from The Met Office and Weathercast. This forms part of the reporting feedback supplied to our clients. All forecasts are postcode specific and show hourly changes, enabling us to refine when to treat your site and the quantities of materials to apply.

Environment

At Ice Watch we've dedicated to providing a high class service whilst being as environmentally friendly as possible. We ensure our travel routes are kept to a minimum by stringing all of our operators and equipment less than 10 miles away from the sites they service. Our equipment is calibrated to ensure optimum amounts of de-icing salt are used, reducing waste of resources and budgets. Our specialist equipment is also calibrated to achieve application rates recommended by the Code of Good Ploughing Winter Maintenance. Our extensive range of equipment ranges from tractors with rubber tipped snow blades, tracked snowblowers, mini tractors and quad bikes for larger areas such as car parks, to small hand operated chip spreaders, so we can protect walkways and paths without damaging grass verges, lawns or lawns. To minimise the risk of surface discolouration, we only use white products. The tarcrete covered product you may be familiar with actually contains clay and is brought into buildings, can stain carpet areas. We even recycle our salt bags!

OUR CLIENTS

Ice Watch's nationwide forecasting and gritting service provides peace of mind to clients in both the private and public sectors. Industries we service include:

- Car park management corporations
- Local authorities (district and borough council)
- Facility management
- Property management
- Health (PCTs and hospitals)
- Education (schools and colleges)
- Offices
- Commercial premises
- Industrial premises
- Residential property
- Retail premises
